LANGUAGES & PLATFORMS

- Python
- TypeScript / JavaScript
- React Native / Expo
- Next.js / React
- Godot / GDScript
- HTML / CSS · SQL

AI & LLM

- Claude, OpenAI, DeepSeek APIs
- RAG and search (TF-IDF)
- Prompts and guardrails
- AI agents
- Image generation
- Speech synthesis & recognition

DATA & INTEGRATIONS

- Telegram Bot API (aiogram)
- Telethon
- SQLite, Supabase / Postgres
- REST APIs, RSS / HTML scraping

TOOLS

- Claude Code · Codex
- Git · Playwright · ffmpeg
- Expo EAS · Figma

DESIGN

- UI/UX, web, branding
- Motion and presentations
- Figma · Photoshop · Illustrator
- After Effects · Premiere Pro

EDUCATION

Institute of Business and Design
Design Faculty, diploma — 2024

PERSONAL QUALITIES

- Hardworking
- Diligent
- Detail-oriented
- Reliable
- Proactive
- Fast learner

LANGUAGES

Russian — native
English — technical proficiency

Anton Maynik

AI Solutions Developer / Designer

ABOUT

A designer who moved into development. I've spent 3+ years as a lead graphic designer at GlobalNet / GNM, and for the past year my main focus has been development: AI agents, LLM-powered Telegram bots, web services, mobile apps and games — from idea and architecture to a working version. I write code paired with AI (Claude Code, Codex): I design the logic and data myself, review every decision, cover critical logic with automated tests and package projects for one-click launch. Over the year: 8 projects and about 70,000 lines of code. Design remains my strength: I understand business problems from the inside, and my interfaces look like a product from day one. Case studies with task, solution and result — entwoidesign.online/developer.

EXPERIENCE & PROJECTS

AI Tools Development — GlobalNet / GNM

Marketing Department, Lead Graphic Designer · 2023 — present

- Clients waited for a manager even on routine questions — built an AI sales assistant in Telegram (Python, aiogram, LLM + RAG over the knowledge base): answers on services and pricing without making things up, qualifies the lead and routes it to a manager queue with ticket numbers, an archive and Excel reports; 8,500+ lines, 600+ anti-hallucination tests.
- The industry news channel was run by hand — built a system that collects news from 343 sources (channels, media, 500+ client sites), filters it through a "rules → fast AI → 6-criteria analysis" funnel and sends drafts to editors with buttons; the funnel cut token spend by about 90%, and the system learns from editors' decisions.
- Sales needed the case for peering in numbers — built a web calculator for gblnet.ru: from a client's AS number it pulls data from 8 open sources (RIPEstat, PeeringDB, CAIDA), compares routes and estimates savings; zero dependencies, with an admin panel and two embed formats.
- Complaints in client chats got lost — built a monitoring bot that structures conversations into a database and alerts a manager about negative signals via a neural network.
- Routine design requests got lost in the work chat — built an AI agent that finds briefs itself, produces on-brand layouts (HTML, image generation, Figma, animation, SVG) and takes revisions by text or voice; 8,000+ lines of Python.

"Pets" Mobile App — client project

2026 · React Native / Expo, Supabase

- A client needed a pet-care app with shared family access — designed and built it for Android, iPhone and the web from one codebase: 25+ screens, database-side permissions (Postgres RLS), APK and over-the-air updates, living animated characters; ~12,700 lines of TypeScript.

Night Shift Hotel — own game

2026 · Godot 4, GDScript · in development

- A 2D horror-deduction game about a hotel night clerk: designed and built a living hotel simulation, a clue system with no 100% answers, a 7-night campaign and ElevenLabs voice-over; ~31,000 lines of GDScript, 80 automated tests, all balance in JSON.

Web — Next.js and hand-built sites

2026

- Built my bilingual portfolio entwoidesign.online (Next.js, TypeScript, Tailwind) and a responsive GNM-IX landing page as a single dependency-free HTML file. Earlier: designer at Cheeseberry, TenChat, METRO, Artflash (2022–2023).
